

# DATA ASSIMILATION SHEET

Information that is not well organized can be difficult to understand and often gets overlooked. In order to ensure that all our hard work is appreciated and understood by our audience we need to organize it.

For each survey, decide whether each of the five comments emphasizes human characteristics, physical characteristics, forest characteristics, or other. Find the column for the region your survey came from and mark a tally for each of the comments.

Later in this study we will use another data assimilation sheet to assimilate all the data our groups have gathered. So please gather your data carefully, your class is depending on you!

## OREGON REGIONS

<b>Coast Range</b>	<b>Willamette Valley</b>	<b>Klamath Mountains</b>	<b>Cascades</b>	<b>Eastern Cascade Slopes and Foothills</b>	<b>Columbia Plateau</b>	<b>Blue Mountains</b>	<b>Snake River Plain</b>	<b>Northern Basin and Range</b>
--------------------	--------------------------	--------------------------	-----------------	---------------------------------------------	-------------------------	-----------------------	--------------------------	---------------------------------

### Characteristics

<b>Human Characteristics</b>								
<b>Physical Characteristics</b>								
<b>Forest Characteristics</b>								
<b>Other Characteristics</b>								
<b>Forest + Physical Characteristics</b>
